Hello this is PT Sans

PT Sans is a type family of universal use. It consists of 8 styles: regular and bold weights with corresponding italics form a standard computer font family; two narrow styles (regular and bold) are intended for documents that require tight set; two caption styles (regular and bold) are for texts of small point sizes. The design combines traditional conservative appearance with modern trends of humanistic sans serif and characterized by enhanced legibility. These features beside conventional use in business applications and printed stuff made the fonts quite useable for direction and guide signs, schemes, screens of information kiosks and other objects of urban visual communications.

Hello this is Arial

Arial is a widely used sans-serif typeface designed by Robin Nicholas and Patricia Saunders for Monotype Typography in 1982. It was initially created for IBM's laser printers but gained immense popularity after being included with Microsoft Windows. Arial is characterized by its clean, open forms and diagonally cut terminal strokes, giving it a slightly more humanist feel than some geometric sans-serifs. Its high legibility and versatility make it suitable for a broad range of applications, from body text to headlines, in both print and digital media. While often compared to Helvetica, Arial possesses subtle design differences that contribute to its distinct appearance. Due to its widespread availability and clear design, Arial remains a popular and practical choice for various design needs.
